

Ghulam Mustafa Khizar

gmkhizar9@gmail.com | +92 320 9609931
Lahore, Pakistan

EDUCATION

ARID UNIVERSITY

BS IN COMPUTER SCIENCE

Expected 2028 | RWP, PK

Focusing on foundational AI/ML engineering, advanced linear mechanics, and intelligent design workflows.

COURSEWORK

MATHEMATICS FOR AI

Linear Algebra for ML

High-Dimensional Vector Spaces

Linear Transformations & Projections

Matrix Determinants & Inversion

Cramer's Rule Optimization

Minors, Cofactors & Tensors

COMPUTING FOUNDATIONS

Web Technologies

Data Structure and Architecture

Object-Oriented Concepts

Application Development Roadmaps

SKILLS

TECHNICAL AI

Familiar / Learning:

TensorFlow • Mobile App Development •

Advanced Programming • AI Prompt

Engineering • Model Training Foundations

DESIGN BRANDING

Digital Image Editing • PNG Manipulation

• Social Media Aesthetics • Branding

Layouts • Vector Graphics

TOOLS OS

AI Design Generators • Graphic Editing

Suites • iOS • Android OS • MS Office

OBJECTIVE

Motivated Computer Science/AI student with a strong mathematical foundation and a passionate focus on mobile application development, artificial intelligence, and digital design. Eager to leverage academic knowledge in linear algebra and emerging AI frameworks (TensorFlow) to build innovative software solutions and engaging digital media branding.

PROJECTS & DESIGN EXPERIENCE

SOCIAL MEDIA AESTHETIC & BRANDING ENGINE | INDEPENDENT DESIGNER

Recent Project

- Conceptualized and executed modern digital branding assets, focusing on high-quality visual identity and layout cohesion.
- Engineered advanced AI-driven design prompts to generate targeted graphic concepts, streamlining the creative ideation workflow.
- Performed expert image editing, asset composition, and PNG background manipulations to create clean, distribution-ready media assets.
- Created personalized, culture-focused design paradigms optimized for digital platforms.

MACHINE LEARNING FOUNDATIONS & MATRIX MODELING | AI RESEARCHER

Ongoing

- Implementing linear transformation and matrix inversion algorithms to analyze high-dimensional vector data patterns.
- Developing predictive models using TensorFlow to study computational data processing and neural network layer behaviors.

MOBILE APP ARCHITECTURE & DEEP LEARNING EXPLORATION | RESEARCHER

Self-Directed Learning

- Formulated a structured application development roadmap to systematically learn native and cross-platform app deployment ecosystems.
- Commenced foundational research into Machine Learning concepts, exploring the implementation of computer vision pipelines using TensorFlow.
- Applied theoretical matrix mechanics, Cramer's rule, and linear transformation algorithms toward understanding neural network data processing layers.

ACADEMIC HIGHLIGHTS & CORE

COMPETENCIES

- **Matrix Mathematics:** Skilled in using basic matrix algebra, determinants, and Cramer's Rule to solve complex data equations.
- **Data Foundations:** Clear understanding of ICT concepts, focusing on how raw data is processed into useful information.
- **Device Compatibility:** Experienced with both iOS and Android platforms, testing how apps and media display across different screens.
