Objective

Full-Stack Developer specializing in MERN stack, AI/ML fundamentals, and interactive web systems. Focused on building scalable, performance-optimized applications with strong UI/UX and backend architecture design.

Education

BS Computer Science (AI/ML Focus) , Arid University	2024 – 2028
Core: OOP, DBMS, DSA, Software Engineering, Machine Learning Foundations	
Intermediate (FSc Mathematics) , Punjab College	2022 – 2024

Experience

Full Stack Development & AI Engineering (Self Projects)	2024 – Present
- Built multiple full-stack applications using MERN concepts with authentication, routing, and API integration. - Designed responsive frontend interfaces with React-style component thinking and modern UI principles. - Developed backend services including REST APIs, request handling, and database operations. - Worked on AI/NLP-based projects including resume screening and TensorFlow experimentation for model understanding.	

Skills

Programming	C++, JavaScript, Python, TypeScript, Dart, Flutter
Frontend	React, HTML, Tailwind CSS, Next.js, Responsive UI Design
Backend	Node.js, Express.js, REST APIs, File Handling, Auth
Database	MongoDB, SQL (Schema Design), Relational Databases
AI/ML	TensorFlow (basic), Scikit-Learn, NLP fundamentals
Tools	Git, GitHub, VS Code, Linux, Android Studio, Vercel

Projects

KYZA (AI Chat Workspace) AI-powered conversational workspace designed for intelligent, context-aware interactions with a modern responsive interface. Supports multiple AI modes, image and document understanding, and real-time AI conversations. Deployed on Vercel [Project Link](#)

MConnect (Real-Time Messaging System)

TypeScript-based messaging platform designed with modular architecture, real-time interaction logic, and scalable frontend state management for seamless communication flow.

Mustav (Interactive Web Application)

Built and deployed a responsive web application using Next.js and Tailwind CSS. Developed reusable UI components, implemented modern responsive layouts, optimized performance, and delivered a seamless user experience across desktop and mobile devices. [Project Link](#)

AI Resume Screener (NLP System)

Developed an NLP-based system that analyzes resumes against job descriptions using text preprocessing, keyword extraction, and similarity scoring.

Leadership

Project Leadership & Collaboration Experience	2024 – Present
- Led development teams for academic and personal software projects. - Managed GitHub repositories, version control workflows, and task allocation. - Contributed to system design discussions and architecture planning for full stack applications. - Delivered technical presentations explaining project design decisions and implementation logic.
